FIOR & GENTZ
ORTHOPÄDIETECHNIK MIT SYSTEM

THERAPEUTIC SHOES

POST-OP

WELCOME

Dear Customers,

We are happy to present to you our therapeutic shoes in a completely new light.

The catalogue at hand contains all FIOR & GENTZ therapeutic shoes especially designed for treatment after an operation or injury.

Besides the classification into bandage and relief shoes, the table of contents gives an overview of the different shaft and sole designs. All the shoes' details can be found on each shoe's particular product page. Matching insoles are also described on these pages.

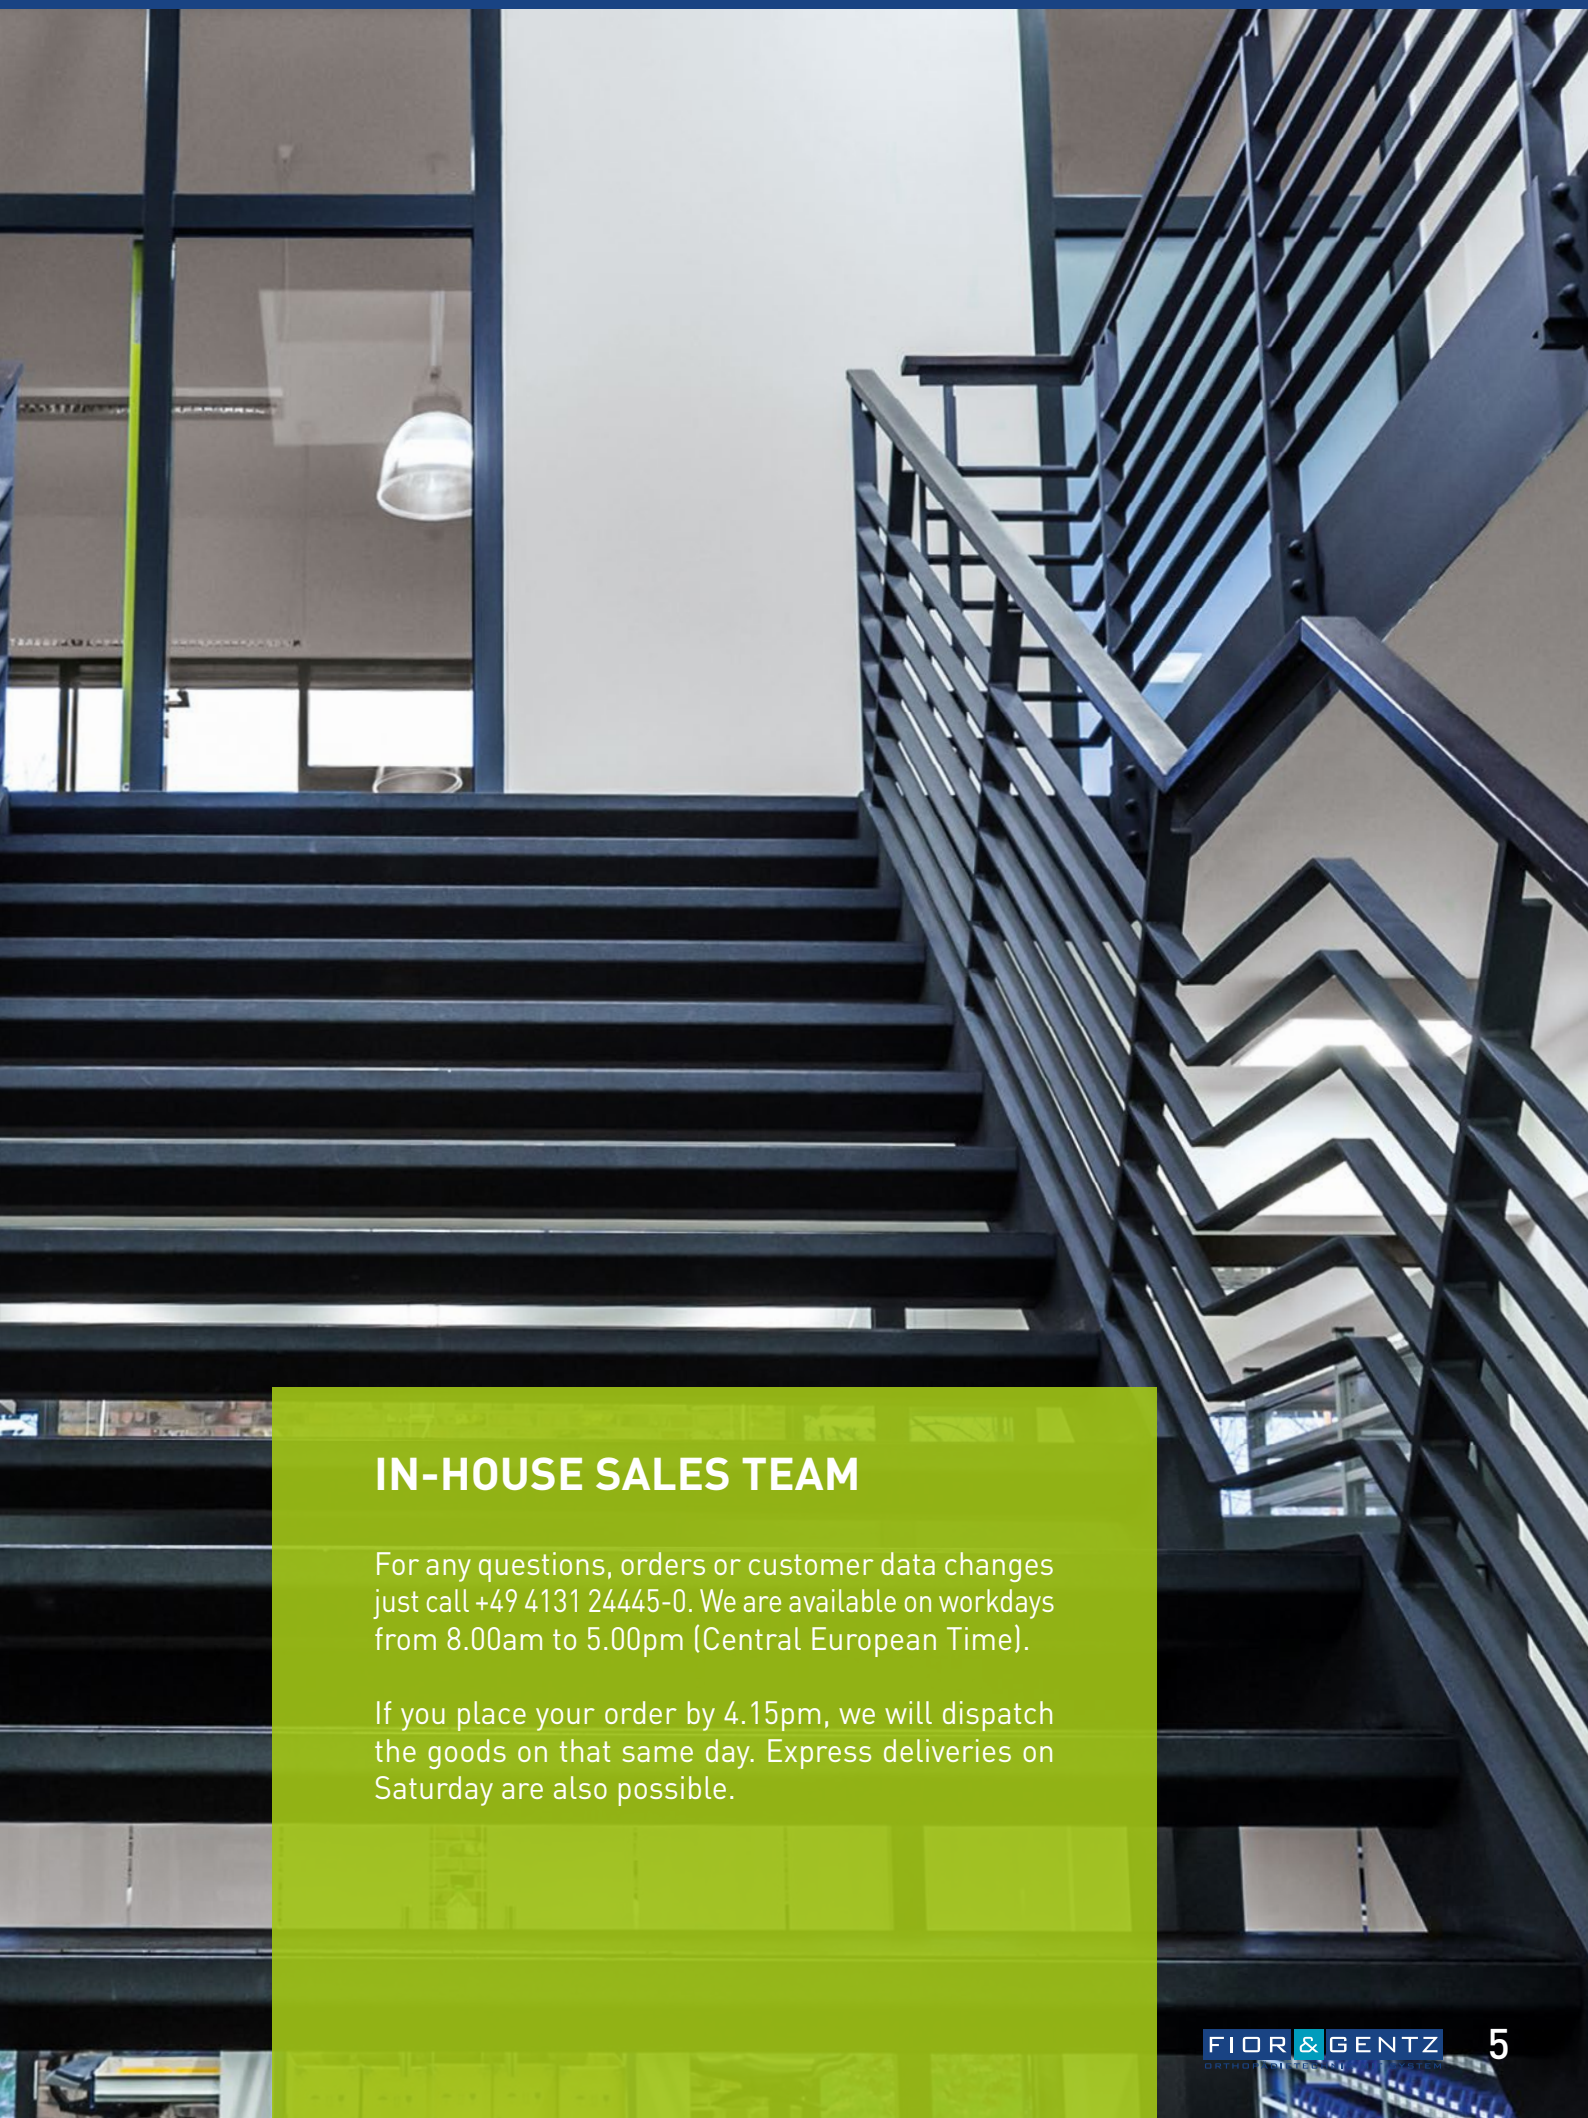
You can find information on shoe sizes and measurement methods from page 50 and matching accessory parts, such as protective caps, from page 52 on.

Our goal is to provide you with products enabling you to treat your patients the best possible way. You will find further therapeutic shoes in our **product catalogues DIABETES** and **HOMECARE**.

With best regards from Lüneburg
Jörg Fior and Ralf Gentz

All our products meet our high standard of quality. This quality standard has been controlled and certified by an independent certification organisation according to the international standard ISO 13485.

SERVICE AND SUPPORT



IN-HOUSE SALES TEAM

For any questions, orders or customer data changes just call +49 4131 24445-0. We are available on workdays from 8.00am to 5.00pm (Central European Time).

If you place your order by 4.15pm, we will dispatch the goods on that same day. Express deliveries on Saturday are also possible.

ADDITIONAL INFORMATION

INNER SHOE DIMENSIONS 44
SPARE AND ACCESSORY PARTS 46
MORE SHOE CATALOGUES 53

SOLE

The rigid soles are made of solid EVA material. This construction prevents flexion of the metatarsophalangeal joints and ensures the patient's foot being stabilised and immobilised. That is how an existent wound is relieved and the wound's healing supported in an optimal way. The soles can be adapted to the patient's needs by grinding and/or adhering material.

WASHABLE

All bandage and relief shoes can be washed at 40°C.

BREATHABLE

The upper fabric of all shoes is breathable.

REINFORCED HEEL CAP

All bandage and forefoot relief shoes with closed heel area have a reinforced heel cap which provides support, cushions the heel and ensures comfortable stability.

ADAPTABLE INNER VOLUME

Due to the generous hook and loop or instep fasteners, the inner volume can be adapted to the patient's individual need for space.

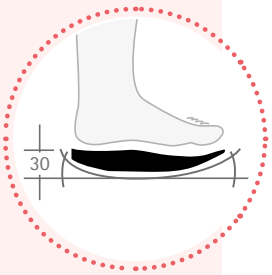
INSOLES

The insoles made of PA or EVA material are placed or attached into the correspondent shoes. Due to reworkable insoles, the inner volume and the hardness of the cushioning can be adapted to individual needs for space and relief. The insoles can be replaced by individual foot orthotics, if applicable.

FLENSBURG

PRODUCT INFORMATION

INDICATIONS
FLENSBURG is particularly suited for patients with wounds at the foot/forefoot area on the sole of the foot (e.g. caused by traumatic injuries), swellings at the foot area (e.g. caused by inflammations) or joint pain in the foot area (e.g. caused by rheumatism or arthrosis) who need a closed shoe with an individually adaptable inner volume and a tall shaft.



SHOE TYPES
The asymmetric bandage shoe FLENSBURG is available in a STANDARD and WIDE version.

SOLE DESIGN
FLENSBURG has a 30mm thick, rigid and extra strong rocker bottom sole with pitch.

INSOLES
Inside the shoe you will find three 5mm thick insoles made of EVA material (STANDARD F00053-XX and WIDE F00054-XX). The top insole has an antimicrobial coating.

SPECIAL FEATURES
FLENSBURG, especially the WIDE shoe, provides much space for bandages and other specific demands. By using the dorsal zip, this shoe can be put on and taken off without even using the hook and loop fasteners. In addition, this shoe has an integrated toe cap for more stability and protection in the toe area.

ERFURT

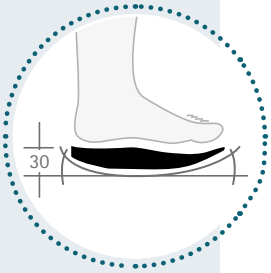
PRODUCT INFORMATION

INDICATIONS
ERFURT is particularly suited for patients with wounds at the foot/forefoot area on the sole of the foot (e.g. caused by traumatic injuries), swellings at the foot area (e.g. caused by inflammations) or joint pain in the foot area (e.g. caused by rheumatism or arthrosis) who need a closed shoe with a fastener system that can be widely opened and a tall shaft.



SHOE TYPES
The asymmetric bandage shoe ERFURT is available in a STANDARD and WIDE version.

SOLE DESIGN
ERFURT has a 30mm thick, rigid and extra strong rocker bottom sole with pitch.

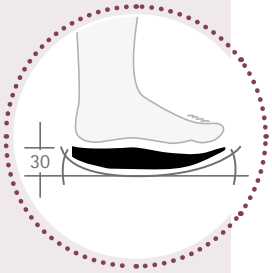
INSOLES
Inside the shoe you will find three 5mm thick insoles made of EVA material (STANDARD F00053-XX and WIDE F00054-XX). The top insole has an antimicrobial coating.

SPECIAL FEATURES
ERFURT, especially the WIDE shoe, provides much space for bandages and other specific demands. By using the dorsal zip, this shoe can be put on and taken off without even opening the instep fastener. In addition, this shoe has an integrated toe cap for more stability and protection in the toe area.

AUGSBURG

PRODUCT INFORMATION

INDICATIONS
AUGSBURG is particularly suited for patients with wounds at the foot/forefoot area on the sole of the foot (e.g. caused by traumatic injuries), swellings at the foot area (e.g. caused by inflammations) or joint pain in the foot area (e.g. caused by rheumatism or arthrosis) who need a shoe with an open toe area and a tall shaft.



SHOE TYPES
The asymmetric bandage shoe AUGSBURG is available in a STANDARD and WIDE version.

SOLE DESIGN
AUGSBURG has a 30mm thick, rigid and extra strong rocker bottom sole with pitch.

INSOLES
Inside the shoe you will find three 5mm thick insoles made of EVA material (STANDARD F00053-XX and WIDE F00054-XX). The top insole has an antimicrobial coating.

SPECIAL FEATURES
AUGSBURG, especially the WIDE shoe, provides much space for bandages and other specific demands. Besides, and if necessary, a protective forefoot cap can be attached to the toe area that keeps the foot dry and warm.

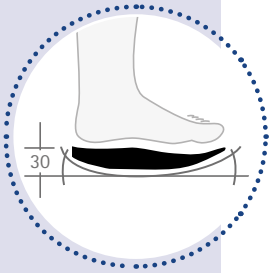
BREMEN

PRODUCT INFORMATION

INDICATIONS
BREMEN is particularly suited for patients with wounds at the foot/forefoot area on the sole of the foot (e.g. caused by traumatic injuries), swellings at the foot area (e.g. caused by inflammations) or operations after other injuries who need a closed shoe with a generous fastener system.



SHOE TYPE
The bandage shoe BREMEN is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
BREMEN has a 30mm thick, rigid and extra strong rocker bottom sole with pitch.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0064-XX) which has an antimicrobial coating.

SPECIAL FEATURES
BREMEN provides much space for bandages of different thickness and can be put on and taken off comfortably by using the generous instep fastener. In addition, this shoe has an integrated toe cap for more stability and protection in the toe area.

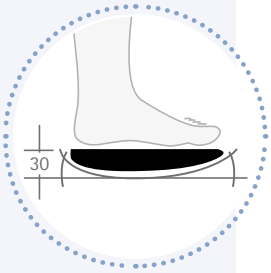
FREIBURG

PRODUCT INFORMATION

INDICATIONS
FREIBURG is particularly suited for patients with wounds at the foot/forefoot area on the sole of the foot (e.g. caused by traumatic injuries), swellings at the foot area (e.g. caused by inflammations) or corrective osteotomies at the forefoot area (e.g. hallux valgus, hammer or claw toes) or other injuries who need a shoe with an open toe area and a tall shaft.



SHOE TYPE
The bandage shoe FREIBURG is symmetric and can be worn on the left as well as on the right. FREIBURG is also available in a KIDS version.

SOLE DESIGN
FREIBURG has a 30mm thick, rigid rocker bottom sole with an even top side.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0060-XX) which has an antimicrobial coating.

SPECIAL FEATURES
FREIBURG provides an open toe area with a strap. If necessary, a protective forefoot cap can be attached there to keep the foot dry and warm. With the practical hook and loop fastener in the heel area, the shaft width can be adapted. Furthermore, FREIBURG is an appropriate **TWINSHOE** and thus height compensation for the relief shoes MAINZ and HANNOVER.

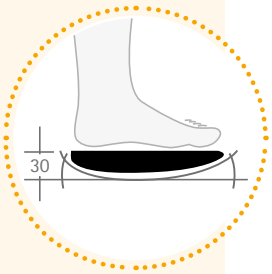
REGENSBURG

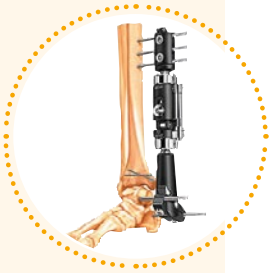
PRODUCT INFORMATION

INDICATIONS
REGENSBURG is particularly suited for patients with operations after an ankle joint fracture who need an individually adaptable shoe with tall shaft which is suitable for an external fixator.



SHOE TYPE
The bandage shoe REGENSBURG is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
REGENSBURG has a 30mm thick rocker bottom sole with an even top side.



INSOLES
Inside the shoe you will find an insole made of EVA material (FO0060-XX) which has an antimicrobial coating.

SPECIAL FEATURES
REGENSBURG has additional seams in the ankle area so that the material can be cut neatly there in order to achieve more space, if needed (e.g. for an external fixator).

PRODUCT INFORMATION

INDICATIONS
FRANKFURT is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or corrective osteotomies at the forefoot area (e.g. hallux valgus, hammer or claw toes) or other injuries who need a shoe with an open toe area, a tall shaft and a thick sole.

SHOE TYPE
The forefoot relief shoe FRANKFURT is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
FRANKFURT has a 40mm thick, rigid and extra strong rocker bottom sole with an even top side.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0060-XX) which has an antimicrobial coating.

SPECIAL FEATURES
FRANKFURT provides an open toe area with a strap. If necessary, a protective forefoot cap can be attached there to keep the foot dry and warm. With the practical hook and loop fastener in the heel area, the shaft width can be adapted.

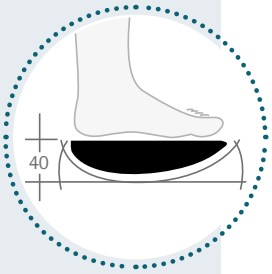
KOPENHAGEN

PRODUCT INFORMATION

INDICATIONS
KOPENHAGEN is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or corrective osteotomies at the forefoot area (e.g. hallux valgus, hammer or claw toes) or other injuries who need a shoe with an open toe area, a tall shaft and a thick sole.



SHOE TYPE
The forefoot relief shoe KOPENHAGEN is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
KOPENHAGEN has a 40mm thick, rigid and extra strong rocker bottom sole with an even top side.

INSOLES
The shoe is delivered with a simple, 10mm thick insole made of EVA material.

SPECIAL FEATURES
KOPENHAGEN provides an open toe area with a strap. If necessary, a protective forefoot cap can be attached there to keep the foot dry and warm. With the practical hook and loop fastener in the heel area, the shaft width can be adapted.

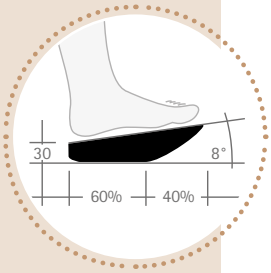
LONDON

PRODUCT INFORMATION

INDICATIONS
LONDON is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or corrective osteotomies at the forefoot area (e.g. hallux valgus, hammer or claw toes) or other injuries who need a shoe with an open toe area and a tall shaft.

SHOE TYPE
The forefoot relief shoe LONDON is symmetric and can be worn on the left as well as on the right.



SOLE DESIGN
LONDON has a 30mm thick, rigid 8° wedge sole (60:40) with forefoot rocker. Due to the wedge sole, the foot's heel to toe movement is changed and the plantar pressure on the forefoot area is immensely reduced.

INSOLES
The shoe is delivered with a simple, 10mm thick insole made of EVA material.

SPECIAL FEATURES
LONDON provides an open toe area with a strap. If necessary, a protective forefoot cap can be attached there to keep the foot dry and warm. With the practical hook and loop fastener in the heel area, the shaft width can be adapted. Furthermore, AMSTERDAM can be worn as **TWINSHOE** and thus height compensation for LONDON.

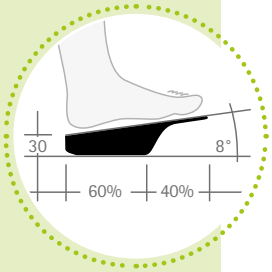
HANNOVER

PRODUCT INFORMATION

INDICATIONS
HANNOVER is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or corrective osteotomies at the forefoot area (e.g. hallux valgus, hammer or claw toes) or other injuries who need a shoe with an open toe area, a tall shaft and forefoot support.

SHOE TYPE
The forefoot relief shoe HANNOVER is symmetric and can be worn on the left as well as on the right. HANNOVER is also available in a KIDS version.



SOLE DESIGN
HANNOVER has a 30mm thick, rigid 8° wedge sole (60:40) with forefoot support which changes the foot's heel to toe movement and relieves the forefoot. The rolling off line can be shifted by grinding the sole.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0060-XX) which has an antimicrobial coating.

SPECIAL FEATURES
HANNOVER provides an open toe area with a strap. If necessary, a protective forefoot cap can be attached there to keep the foot dry and warm. With the practical hook and loop fastener in the heel area, the shaft width can be adapted. Furthermore, FREIBURG can be worn as **TWINSHOE** and thus height compensation for HANNOVER.

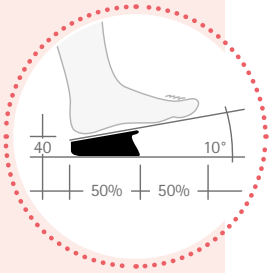
BERLIN

PRODUCT INFORMATION

INDICATIONS
BERLIN is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or (partial) forefoot amputations or operations after other injuries at the forefoot area who need a shoe with shortened, thick sole and a tall shaft without forefoot support.



SHOE TYPE
The forefoot relief shoe BERLIN is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
BERLIN has a 40mm thick, rigid 10° wedge sole (50:50) without forefoot support. Due to the shortened sole, the foot's heel to toe movement is changed and the forefoot area is completely relieved.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0011-XX) with soft surface.

SPECIAL FEATURES
BERLIN provides a shortened wedge sole and thus ensures complete pressure relief of the forefoot area. If necessary, a protective forefoot cap can be attached to the insole to keep the foot dry and warm. Furthermore, BERLIN can be equipped subsequently with a protective stirrup (FO1000-Z5,-Z6,-Z7,-Z8).

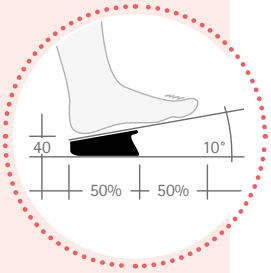
BERLIN with protective stirrup



PRODUCT INFORMATION

INDICATIONS
BERLIN with protective stirrup is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or (partial) forefoot amputations or operations after other injuries at the forefoot area who need a shoe with shortened, thick sole and a tall shaft without forefoot support, but with additional protection against bumps.

SHOE TYPE
The forefoot relief shoe BERLIN with protective stirrup is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
BERLIN with protective stirrup has a 40mm thick, rigid 10° wedge sole (50:50) without forefoot support. Due to the shortened sole, the foot's heel to toe movement is changed and the forefoot area is completely relieved.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0011-XX) with soft surface.

SPECIAL FEATURES
BERLIN with protective stirrup provides additional protection against injuries (e.g. bumps). The protective stirrup is adjustable in length as well thermoformable and can therefore be individually adapted. If necessary, a protective forefoot cap can be attached to the insole to keep the foot dry and warm.

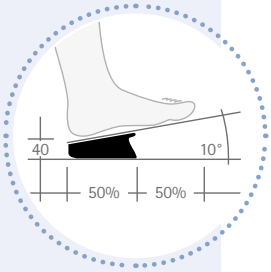
BORDEAUX



PRODUCT INFORMATION

INDICATIONS
BORDEAUX is particularly suited for patients with wounds at the forefoot area on the sole of the foot (e.g. caused by traumatic injuries) or forefoot amputations or operations after other injuries at the forefoot area who need a shoe with shortened, thick sole and without forefoot support.

SHOE TYPE
The forefoot relief shoe BORDEAUX is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
BORDEAUX has a 40mm thick, rigid 10° wedge sole (50:50) without forefoot support. Due to the shortened sole, the foot's heel to toe movement is changed and the forefoot area is completely relieved.

INSOLES
The shoe is delivered with a simple, 10mm thick insole made of EVA material.

SPECIAL FEATURES
BORDEAUX provides a shortened wedge sole and thus ensures complete pressure relief of the forefoot area. If necessary, a protective forefoot cap can be attached to the insole to keep the foot dry and warm. Furthermore, BORDEAUX can be equipped subsequently with a protective stirrup (FO1000-Z9, -Z10,-Z11,-Z12).

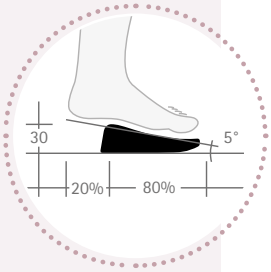
MÜNCHEN



PRODUCT INFORMATION

INDICATIONS
MÜNCHEN is particularly suited for patients with wounds at the heel area on the sole of the foot (e.g. caused by traumatic injuries) or operations after other injuries at the heel area (e.g. heel spur) who need a shoe with shortened sole, tall shaft and without heel support.

SHOE TYPE
The heel relief shoe MÜNCHEN is symmetric and can be worn on the left as well as on the right.

SOLE DESIGN
MÜNCHEN has a 30mm thick, in the forefoot area partially flexible 5° wedge sole (20:80) without heel support. Due to the dorsally shortened sole, the foot's heel to toe movement is changed and the heel area is completely relieved.

INSOLES
Inside the shoe you will find an insole made of EVA material (FO0020-XX) with soft surface.

SPECIAL FEATURES
MÜNCHEN provides an open forefoot area with a low framing brim and an open heel area. If necessary, a protective forefoot cap and/or a protective heel cap can be attached.

INNER SHOE DIMENSIONS

Dear Customer,

We measured our therapeutic shoes according to the Mondopoint system. Afterwards, the shoe sizes were recalculated by means of the Paris Point.

Mondopoint System

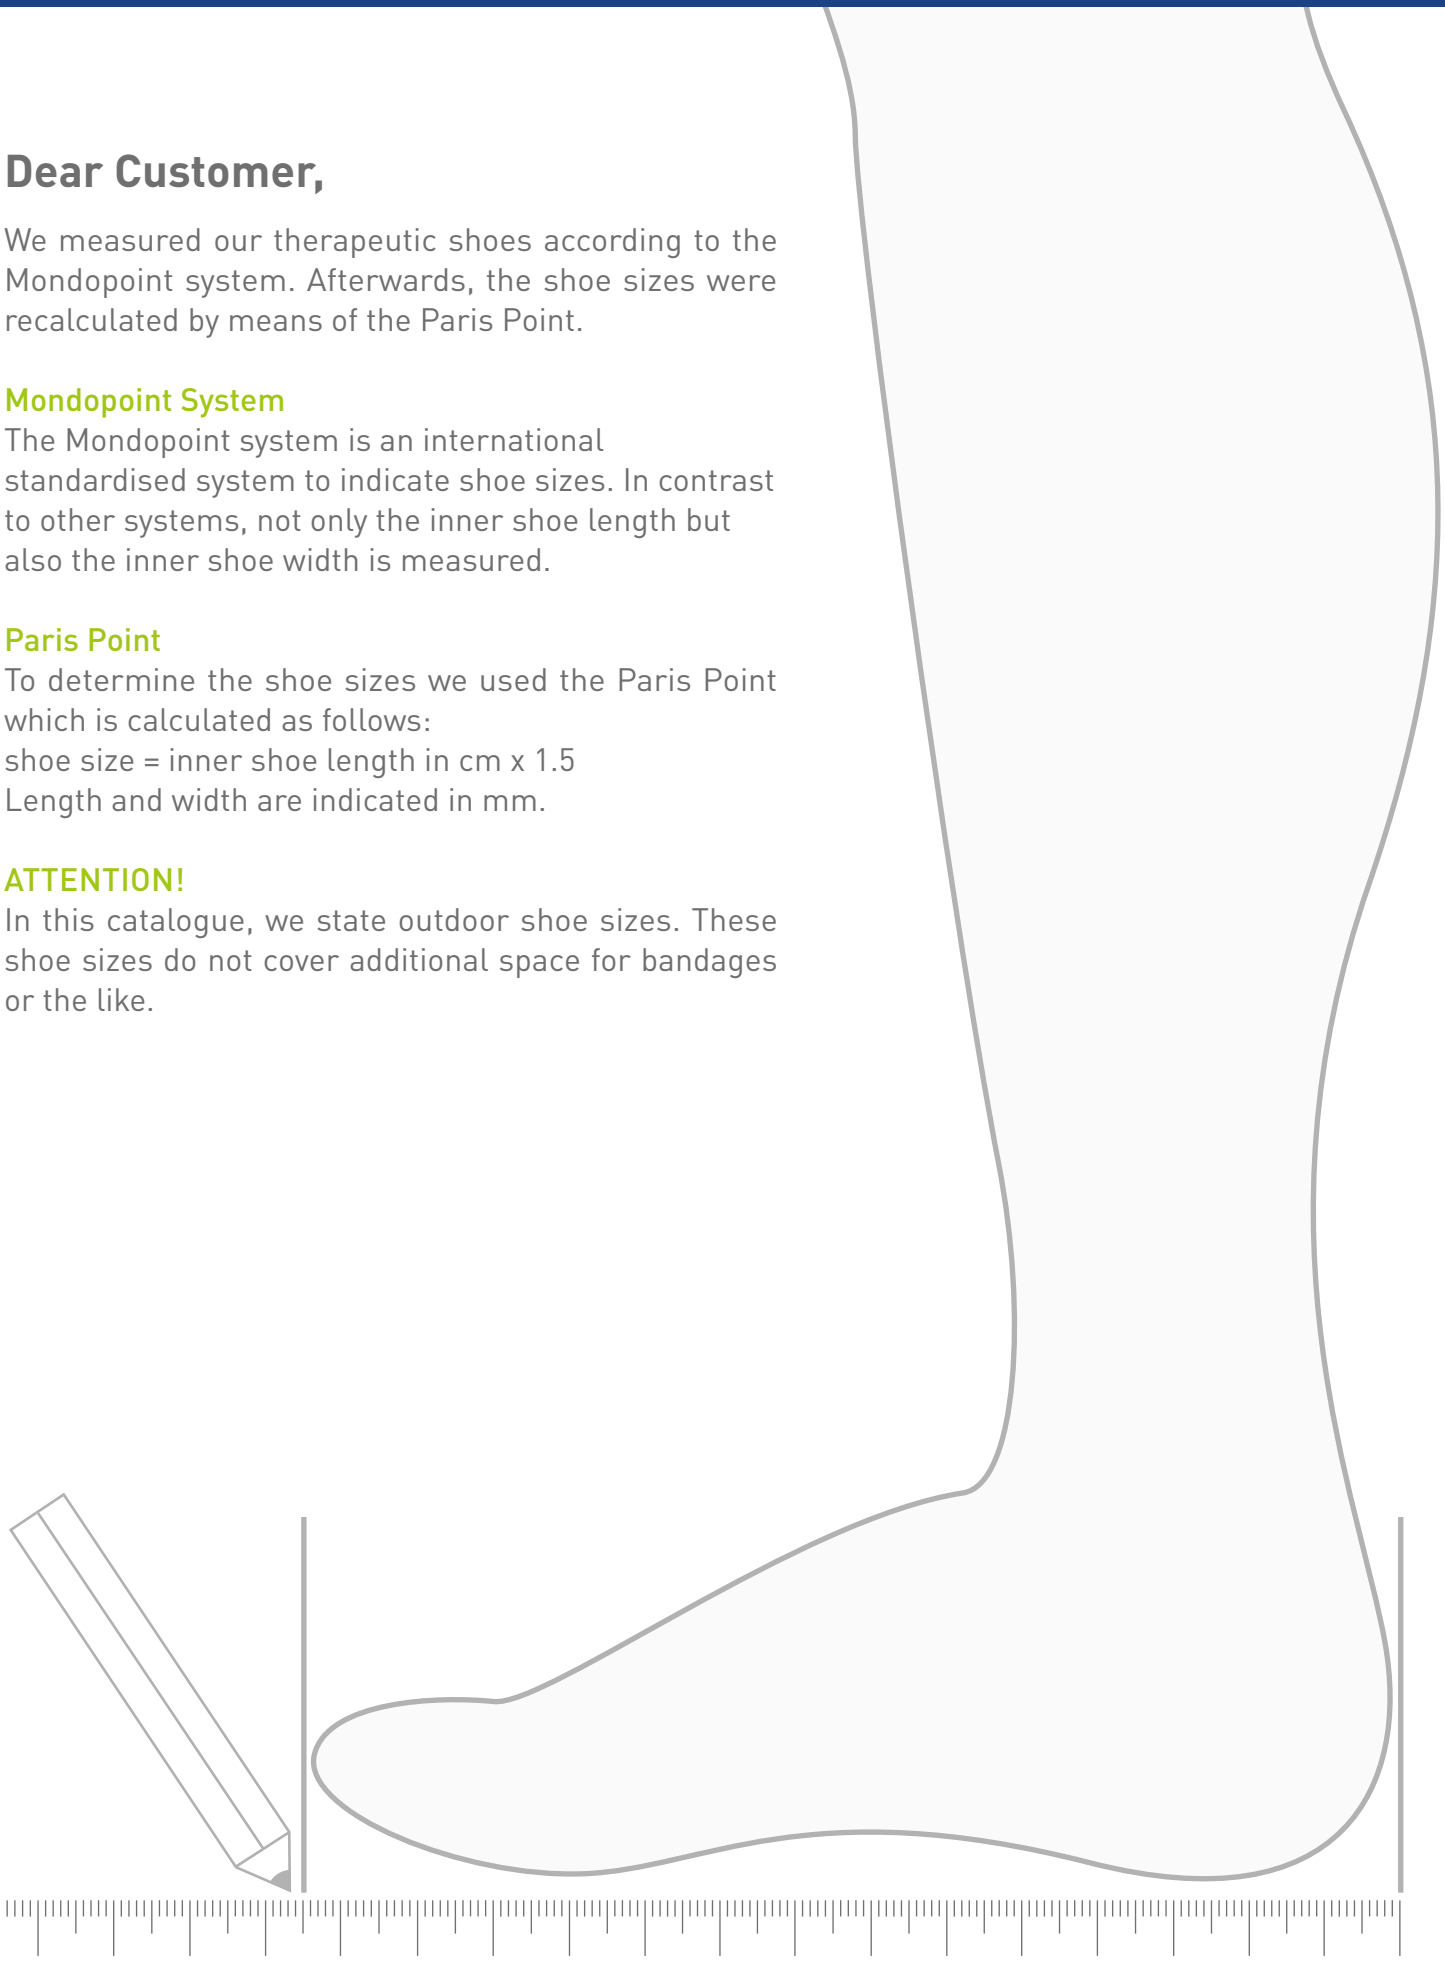
The Mondopoint system is an international standardised system to indicate shoe sizes. In contrast to other systems, not only the inner shoe length but also the inner shoe width is measured.

Paris Point

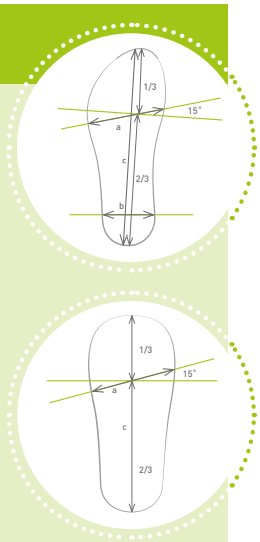
To determine the shoe sizes we used the Paris Point which is calculated as follows:
shoe size = inner shoe length in cm x 1.5
Length and width are indicated in mm.

ATTENTION!

In this catalogue, we state outdoor shoe sizes. These shoe sizes do not cover additional space for bandages or the like.



ASYMMETRIC AND SYMMETRIC SHOES



Inner Shoe Length

The inner shoe length (c) was measured from the middle of the heel area to the middle of the great toe with a standard measurement device.

Inner Shoe Widths (Ball and Heel Area)

The inner shoe widths were measured at the insole.
We measured from the toe-cap and drew a crossline at 1/3 of the insole for the inner shoe width in ball area. At this right-angled straight line a 15° angle was measured. The resulting line was where we measured the inner shoe width in ball area (a). The inner shoe width in heel area (b) was measured at the level of the middle of the heel.

INNER SHOE DIMENSIONS STANDARD (FO0033 and FO0053)
